

- ※ Integrate network audio decoding, digital amplifier and horn;
- ※ High-fidelity speaker Class D power amplifier;
- ※ Loop detection function can remotely monitor the working status of the horn and make maintenance easy;
- ※ The horn sound detection sensor system can remotely monitor whether the horn sound is normal;
- ※ Terminal supports remote update of service software;
- ※ Standard RJ45 network interface, which can be accessed wherever there is an Ethernet port, and supports cross-network segments and cross-routing;
- ※ Automatically power off when there is no signal, automatically turn on when there is a signal, and support service software to adjust the volume.
